

FEATURES & BENEFITS

- manual shears for cutting flat plastic profiles at 90° - 45° and for thin-walled PVC conduits
- shears can be locked in closed position

LOGISTIC DATA

Type	NKC 70
Index Ergom	E02KK-0901000001
Weight [kg]	0,35

Shears are designed to cut stiff profiles, flat profiles and plastic tubes. Profiles may be cut at the angle from 90 to 45 degrees. Shears are suitable to cut perforated (comb-shaped) cable trays (channels). The tray should be notched from one side and then broken. The edge after breaking is much better than after blade cutting. Also the preparation period is significantly shorter than with blade cutting. Shears are blocked in a closed position.

MECHANICAL DATA

Max. diameter of the pipe to be cut [mm]	25
Blade length [mm]	70

DIMENSIONS

Length [mm]	245
